DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 10-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Jonas et al'926 or '042 or '430 of record on 1449.

The references disclose a polythiophene of the claimed formula I, obtained with similar conditions, can be used as a conductive coating or an antistatic coating (see Abstract; col 1).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jonas et al'926 or '042 or '430 of record on 1449.

The references disclose a process for the preparation of these polythiophenes in that the thiophenes of the claimed formula I are polymerized in an organic solvent which is inert under the reaction conditions using oxidants which are suitable for oxidative polymerization --, at temperatures from 0 to 200°C, depending on the oxidants used.

Note that the organic solvents comprising aliphatic alcohols--.

Note that the oxidants comprising ammonium persulfates, potassium permanganate---, iron salts of organic acids such as alkylsulfonic acids such as methane and dodecanesulfonic acid (see cols 3-4).

The disclosures of the references differ from the instant claims in that they do not disclose all of thiophenes of the claimed formulas.

However, they do disclose a very specific formula which is included of the claimed formulae under the same or similar conditions to form the polythiophenes. Therefore, it would have been obvious to one of ordinary skill in the art to select the reactants under process conditions from the references within the limitations of the instant claims since they have been shown to be effective in a similar system and thus would have been expected to provide adequate results. There is no showing of unexpected results derived from said selections.
